Our memories shape how we think about the past, how we plan for the future, and how we think about ourselves. Yet our memories are also constantly being reinvented: we often remember our experiences differently from how they truly happened, and can even remember experiences that never happened at all. False and Distorted Memories provides an overview of recent and ongoing developments in the science of false memory. World-leading researchers unpick questions about flawed recollections, discussing issues as varied as the reliability of highly emotional memories, why we sometimes begin to remember fictional experiences that we have deliberately fabricated, and what happens when we stop believing our memories. Each chapter demonstrates how memory science has furthered our understanding of these important questions, by exploring theoretical ideas and psychological research methods that underpin their investigations. Edited by Robert Nash and James Ost, this volume offers an international and up-to-date perspective on false and distorted memories. The volume also draws

attention to the broad range of real-life contexts in which such distortions might arise and their potential consequences.

False and Distorted Memories illustrates the ease with which memory can be contaminated and the power of the resulting memory errors, providing an integral text for researchers and students interested in the psychology of memory.

The authors introduce and explain traditional approaches to the study of sex and gender whilst acknowledging their weaknesses and exploring a range of alternative ways of tackling this extremely complex subject.

In DISCOVERING PSYCHOLOGY, 3rd Edition, the authors use a familiar chapter structure to provide an easy roadmap for the course, while highlighting connections within psychology as well as between psychology and other disciplines. The writing and features are smart and engaging, and consistently illustrate the benefit of using multiple perspectives within psychology. Cacioppo and Freberg offer the best science possible, including exciting new research findings likely to expand students' understanding of psychology as a scientific field of study.

Features and images coordinate with and enhance the text, providing additional opportunities for critical thinking and connecting ideas. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

For nearly four centuries, our understanding of human development has been controlled by the debate between nativism and empiricism. Nowhere has the contrast between these apparent alternatives been sharper than

in the study of language acquisition. However, as more is learned about the details of language learning, it is found that neither nativism nor empiricism provides guidance about the ways in which complexity arises from the interaction of simpler developmental forces. For example, the child's first guesses about word meanings arise from the interplay between parental guidance, the child's perceptual preferences, and neuronal support for information storage and retrieval. As soon as the shape of the child's lexicon emerges from these more basic forces, an exploration of "emergentism" as a new alternative to nativism and empiricism is ready to begin. This book presents a series of emergentist accounts of language acquisition. Each case shows how a few simple, basic processes give rise to new levels of language complexity. The aspects of language examined here include auditory representations, phonological and articulatory processes, lexical semantics, ambiguity processing, grammaticality judgment, and sentence comprehension. The approaches that are invoked to account formally for emergent patterns include neural network theory, dynamic systems, linguistic functionalism, construction grammar, optimality theory, and statistically-driven learning. The excitement of this work lies both in the discovery of new emergent patterns and in the integration of theoretical frameworks that can formalize the theory of emergentism.
