trimwork. Baseboard, crown molding, door and window trim, and much more are explained with color photos and easy-to-follow instructions.

First published in 1863, this book contains a classic guide to carpentry and joinery. Carpentry refers to the skilled trade in which the primary work performed is the cutting, shaping and installation of wood; and joinery is the collective term for the wooden components of a building. This fantastic volume will appeal to those with an interest in wood work, and constitutes a must-have addition to serious DIY collections. Contents include: "To Find the Lengths and Bevels of Hip and Common Rafters", "To Find the Lengths of the Jacks", "To Find the Backing of the Hip", "Where to Take the Length of Rafters", "Difference between Hip and Valley Roof", etc. Many vintage books such as this are increasingly scarce and expensive. It is with this in mind that we are republishing this classic volume now in an affordable, modern, high-quality edition complete with a specially-commissioned new introduction on wood finishing.

"This book provides all the information you need to finish the inside of a house, following a logical progression from installing insulation and drywall to hanging cabinets and doors to putting down floors and running trim"--

This book is both a contribution to an interdisciplinary study of literature and other media and a pioneering application of cognitive and frame-theoretical

approaches to these fields. In the temporal media a privileged place for the coding of cognitive frames are the beginnings while in spatial media physical borders take over many framing functions. This volume investigates forms and functions of such framing spaces from a transmedial perspective by juxtaposing and comparing the framing potential of individual media and works. After an introductory theoretical essay, which aims to clarify basic concepts, the volume presents eighteen contributions by scholars from various disciplines who deal with individual media. The first section is dedicated to framing in or through the visual arts and includes discussions of the illustrations of medieval manuscripts, the practice of framing pictures from the Middle Ages to Magritte and contemporary American art as well as framings in printmaking and architecture. The second part deals with literary texts and ranges from studies centred on framings in frame stories to essays focussing on the use of paratextual, textual and non-verbal media in the framings of classical, medieval and modern German and American narrative literature; moreover, it includes studies on defamiliarized framings, e.g. by Julio Cortazar and Jasper Fforde, as well as an essay on end-framing practices. Sections on framings in film (including the trailers of Tolkien s "The Lord of the Rings") and in music (operatic overtures and Schumann s piano pieces) provide perspectives on further media. The volume is of relevance to
